POOL

Welcome

to our

French

liner

specialist

ALBON has been providing unique expertise in manufacturing pool liners, reinforced membranes and covers for over 20 years. Over 140,000 pools are equipped with liners or protections manufactured by us. Every year, 2 million m² are produced in our factories, but each product is unique!

So let's get going!

You have decided on the pool's shape and its location. But you know that the choice of covering also determines the overall appearance of your pool over the long term. Better not to leave anything to chance.

This document will help you make your choice from the many ALBON solutions. Quality, bottom colours, wall colours, visual appearance with water, and friezes, etc. Let yourself be inspired by the next few pages and take advice from your swimming pool manufacturer. Made-to-measure, your ALBON liner will be the object of focus throughout its manufacturing process. Several quality controls are carried out right up to its packaging. For your utmost satisfaction.

Enjoy swimming in your pool with its ALBON liner!

Albon^{création}

is a unique process that aims to meet your need for difference. Every year, Albon innovates by offering exclusive frieze and liner colours that are perfectly in line with your outside space design and decoration trends.

Drawing on excellent product and market expertise, our teams develop new patterns, always with Albon quality.

Flicking through the pages, you will see in the pictogram

that the colours in question are exclusively created by Albon and you won't find them anywhere else.

The liner designed specifically for inground swimming pools.

The Albon Classic range offers you a choice of 75/100th thick liners to customise your pool and make it watertight. It is available in a choice of 9 themes which can be matched with one of the 38 friezes.

A safe solution to make your pool watertight at the lowest costs.

10 years
leaves and welds
(5 full years and 5 degressive years),

in water at
28 °C continuously.

Membrane compliant with standards
NF P 54803 and NF P 54802.

Our Classic liners have successively
passed resistance tests

against stains
STEARIX

against abrasion
TABER

High quality liners, a reference for modern pools

Celsius is a top-quality 75/100th thick liner designed to meet the highest requirements: water temperatures of up to 33°C, tolerance to a water treatment system that may result in high chlorination, etc. Celsius has a PVC formulation that improves its performances over all main criteria.

It is particularly recommended for pools that are heated or covered with a cover or bar cover.

It is available in a choice of 21 themes which can be matched with one of the 38 friezes.

The Celsius liner is a guarantee of quality and longevity.

It is recommended by most swimming pool professionals.

10 years
leaves and welds
(5 full years and 5 degressive years),

3 years
dimensional stability,

in water at
33 °C continuously,

and
2.5 ppm or chlorine.

Membrane compliant with standards
NF P 54803 and NF P 54802.

Our Celsius liners have successively
passed resistance tests

ERICHSEN

even more resistant to aggressions and pool temperature rises.

The Premium liner is a concentration of the best technologies in swimming pool liner manufacturing. 75/100th thick, coated with several coats of reinforced varnish, whose components impregnate not only the surface but also the material, the Premium liner meets the highest requirements for complete peace of mind.

It is especially recommended for pools covered with a shelter or for indoor swimming pools.

A choice of 9 themes which can be matched with one of the 38 friezes.

Exclusive equipment that has the advantage of the best guarantees.

Pool comfort and safety

The non slip liner makes pool access safe, thanks to its specially designed texture. ALBON non-slip is available in CELSIUS quality and has the same benefits as the C Class.

Class C is the best score that can be assigned to a non-slip liner according to the benchmark standard.

To assess a liner, a person walks barefoot on a slope covered with the liner to be tested. The ground is then covered with oil. The slope is gradually increased and when the person no longer feels safe, everything is stopped and the angle of inclination of the slope is recorded. Class C is assigned beyond 24° of inclination. The Albon non-slip liner has been successfully assessed at 28°. It is available in 6 themes.

All our non-slip liners have successfully passed the DIN 51097 standard.

They are C class and Celsius quality.

10 years
leaves and welds
(5 full years and 5 degressive years),

3 years
dimensional stability,

in water at
33 °C continuously,

and
2.5 ppm or chlorine.

Membrane compliant with standards
NF P 54803 and NF P 54802.

Our non-slip liners have successfully
passed the DIN 51097 standard and
are Class C.

An excellent way of adding an additional personal touch to your pool.

Liner Collection

What colour do you want your swimming pool water to be?

A lively decor: the colour of the water varies depending on the liner, the season, the degree of sunshine, the environment, the orientation and the dimensions of the pool, etc., and your mood.
