

Winterisation cover 

# ProCover

## Your cover fully protected

**Albon**

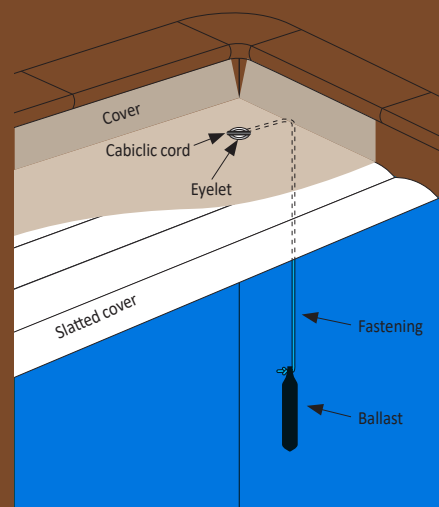

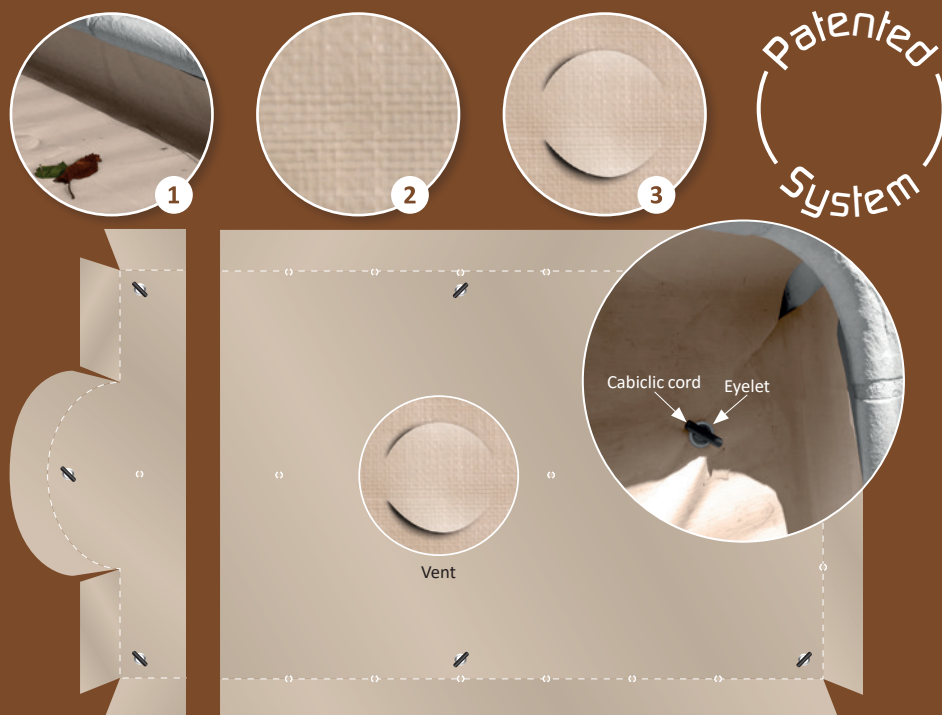

MADE  IN FRANCE

# ProCover

The ideal solution to protect the cover and the pool in autumn and winter.

ProCover protects the pool cover from dirt, stains, U.V.s and algae growth.

## 1 Cover slat protection

ProCover prevents staining by blocking the passage of leaves or other impurities and the accumulation of dirt.

## Protecting the pool

The cover's sides prevent leaves from falling into the pool.

## 2 Opacity

Prevents the growth of algae and protects the cover's slats from UVs.

## 3 Vents

allow a fluid flow of rainwater.

## Adaptable

to all types of cover size, either submerged or above-water. Compatible with a BANC. Compatible with opaque PVC and Polycarbonate slats.

## Quick and easy installation

Its exclusive patented ballast holding system makes it very easy to install. The very lightweight ProCover can be installed in 3 minutes.

## The poolside remains intact

as there are no drill holes near the pool.

## Precautions for use

ProCover should only be used in autumn and winter, outside these seasons it must be removed. It is not compatible with the so-called solar translucent PVC slats. The black side of the ProCover must imperatively be placed against the cover slats.

\*Production and material against any manufacturing defects according to our general guarantee terms and conditions.

GUARANTEE\*
